

Here is some information you asked about hosting your web site or in knowing how to manage a web site. These are some of the things that the Lord has taught me in the last year. I am new to creating web sites. I am in a church situation where there is no money for a web site. If you have any questions please feel free to e-mail me or call me 352-345-3009. Robert De Corah

The following have provided the following results since the last two weeks of November

Month	Unique visitors	New visitors	Repeat visitors	Visits
February, 2008	90	90	0	158
March, 2008	289	256	33	619
April, 2008	826	753	73	1299
May, 2008	179	145	34	246
Average per month	346	311	35	580.50

Visitors per month for the last 12 months

Activity per month for the last 12 months

Activity per month for the last 12 months

Month	Visits	Views	Views per visit
February, 2008	158	511	3.23
March, 2008	619	1383	2.23
April, 2008	1299	2224	1.71
May, 2008	246	462	1.88
Total	2322	4580	

www.officelive.com is the free web site that will host you. They have a 500 megabyte limit. I am not up to 8 megabyte yet. I have learned to use off web host programs to store for free what I want to post. I am using www.rockyou.com for some of the pictures

and fancy lettering. I am using www.google.com/calendar for the calendar. I am using www.Godtube.com and www.youtube.com for many of the links. Many of the items collected I gather from e-mails or web site by right mouse clicking and save as to my desk top. I upload it into what ever program I want to use to create the links. On the [Spiritual Resources](#) all of the programs are links.

Note some web sites would allow you to copy my entire page and paste it into their web creation page and still keep the links. Some do not and then you can still paste the pages but you have to underline the words to re link them. You get the links either by hovering your mouse over their link on their site you will see the address. You click their link to see the site where you went to in order to find the web address. The last way is to use what information you have for instance W. A. Criswell sermons to find the web site your looking for and use the information for the web address on the search page.

Two of the most important things to do for people to find you is to use the Search Engine Optimization

1) Key Words Meta tag: example from Page called [Amazing Grace: Just the Black Notes](#)

Amazing Grace Just the Black Notes, Wintley Phipps, Also on this page, It is Well With My Soul, by Wintely Phipps, a Reading of the Creation Story, posted on Gulf Ridge Park Baptist Church, web site, by Robert De Corah, says this is some of, the best Christian videos, on a Christian Web site.

Please note how chopped up this is by the use of commas. This is where search engines looks when someone types in to find whatever they are looking for. Each page should be done this way.

Important feature that most over look is including each page after a comma in the home page Key Word Meta tag for each page on the web site. Most search engines do not like more then about five words between commas and do not like more then about eight repeats of a word or phrase because it thinks your spamming for position.

2) Description Meta tag is what people read right below when the search results are posted:

Amazing Grace Just the Black Notes Robert De Corah Recommends this video about how spirituals were based on five black notes by Wintely Phipps. Also on this page is It Is Well With My Soul by Wintely Phipps and the reading of the Creation Story.

This is just as important because now people must decide whether to pick you from the search results.

Please make note of my home page Key Word Meta Tag:

Robert De Corah pastor of Gulf Ridge Park Baptist Church, located in Brooksville,

Florida 34601 A Southern Baptist Church, Robert Decorah, Site Map, A Letter from Hell, Red Skelton Pledge of Allegiance, Shout to the Lord American Idol, Raven Testimony, Rapture Video, Tale of Two Brains, The Prodigal Girl, Spiritual Resources, Contact Us, Oprah Rejects Jesus, Autistic Youth makes six three point basket ball shots, Mary Did You Know by Kenny Rogers, Jesus Splat painting from YouTube, Banners, [Amazing Grace Just the Black Notes](#) , Pretty Amazing Grace Neil Diamond American Idol, When Your Child Goes to Jail, Ezekiel 38 & 39 The Coming Russian Iranian Invasion of Israel, The Final Jihad, God Only Cries For the Living, Diamond Rio, In God We Still Trust, by Diamond Rio, Awesome Videos Christian

You need to learn how to use your web site link feature. If your linking to an outside web site use www.kkkkkkkk.com KKKK means nothing put your information for your link there.

If it is other source use www.http/www.kkkkk.com

If it is a document you up loaded to their web site click appropriate box and a browse button will appear and click the document and press the OK key and it will automatically add. The same goes for pictures etc.

Learn to use a program to create a PDF file so everyone can download your information your posting so they do not need a specific program or simply save it as a txt file that most programs can open.

Also learn to make your web host do what they do not show you. The only way to do so is by trial and error. For example if you go to my web site and look at a video page, the normal way is to create a html page. You go to youtube for example click on a video to watch it. They post an embed code to post on your site. You copy it and paste it into the box your program provides. This creates a problem. You can not alter your web site after that past the video. I learned a work around. I just paste the code right into the page. This allows me still to work with the web site past the picture. Embedding keeps the person on your page. Note click box show in a new page to return them back to your site or they bounce off your site once they finish the video. If you link the video using the www.kkkkkk.com information your taken to an off site web site. You will note on one of my videos that is what I did on the web page because the web site restricted the coding that did not allow the html code.

Learn to use frames for positioning. Your web program will give you either limited options with a page layout button or limitless options putting in as many as you want by way of columns or rows.

This helps balance the page.

Learn to redirect people back around your site linking a phrase or sentence to what they might be interested in. In the link place they will ask you link to page on web site. Once you select it a browser button appears and you go and select web page. For example [Home](#) note the redirect for mapping and link to e-mail.

Learn not to show all of your pages on the main menu if your posting many documents or videos. Create a separate page instead. When your creating a page select the page your wanting to post to from the menu. For Example I just recently simplified by web site by creating a page called Awesome Videos.

[Awesome Videos](#)

During the creation process they will show all of the pages on that page with the ability to move your new document up or down the list. Notice my videos are alphabetical. I move the new video up or down the list to the place I want it to appear.

I am in the process in background of converting documents into pdf files that I will post on a new web page I have been thinking about. I save them to my desk top where it is easy to find or to a new folder I create such as MY WEB where I can locate them or MY PDF.

Use your reports section to see what people are interested in

Keep people coming back and referring your site by e-mail blast and learn to copy your link or information to put into your e-mail blasts. As a pastor I go door to door in my community and put that on every piece of literature we put out.

Learn to use other programs to manage file sizes such as sermons - www.erightsoft.com/SUPER.html. You can reduce a sermon about 35 mega bytes to about 12 mega bytes....etc. Note most web sites restrict uploads to about 15 mega bytes. You learn to reduce file sizes.
